

THINK10

Customer Dashboard

Functional, UX, backend and customer-journey requirements

Prepared for	Think10 Founding and Development Team
Primary audience	Product managers, UI/UX designers, backend developers, frontend developers, QA engineers, customer success and operations teams
Version	1.1 - Developer-ready functional specification with visual workflows
Date	15 July 2026

Purpose: define what must be built, how users navigate it, what the system does in the background, how every lifecycle flows from one screen to the next, and how success will be measured.

Decision taken for Version 1.1

The customer dashboard will feel like a guided business workspace, not an accounting system. The default experience will show the next recommended action, with detailed information available only when the customer opens it.

1. Dashboard purpose

The Customer Dashboard gives a founder one secure place to ask Zyne, manage the business profile, find and book vetted advisors, attend consultations, receive reports, complete action plans, manage credits and contact Think10 support.

- Reduce the feeling of being alone or unsure about the next business decision.
- Move the customer from question to diagnosis, expert support and action.
- Maintain continuity between Zyne and human advisors.
- Make subscriptions, credits, recordings, reports and tasks easy to understand.
- Keep communication and files inside Think10 for confidentiality and quality.

2. Customer roles and plan states

Role / state	Access	Notes
Visitor / Lead	Public website and limited Zyne VA.	No dashboard until account creation.
Free Registered User	Business profile, assessment, limited Zyne VA, advisor discovery.	Conversion path to paid plan.
Zyne Advisory Customer	Paid Zyne VC, reports, action plans and optional pay-per-call booking.	AI-first plan.
Hybrid Advisory Customer	Zyne plus included human consultation credits.	Core subscription plan.
Premium Customer	Priority booking, enhanced Zyne, longer sessions and premium community/services.	Entitlements controlled by plan.
Enterprise Contact	Enterprise enquiry and proposal portal.	May later receive a separate enterprise workspace.
Paused / Cancelled	Read-only historical access according to policy.	No new paid usage after entitlement ends.

3. Recommended navigation

Order	Top-level menu	Main pages inside	Result / next impact
1	Home	Next action, Zyne prompt, bookings, action plan, credits, alerts	Customer knows what to do next.
2	Ask Zyne	New conversation, history, reports, files and saved prompts	Customer receives immediate guidance.
3	My Business	Business profile, health assessment, goals, KPIs and documents	Think10 understands the customer context.
4	Advisors	Recommended advisors, search, compare, profile and booking	Customer selects trusted human expertise.

Order	Top-level menu	Main pages inside	Result / next impact
5	Bookings	Upcoming, past, reschedule, join call, reports and follow-ups	Customer manages consultations.
6	Action Plans	Tasks, owners, deadlines, progress and reviews	Advice turns into implementation.
7	Plan & Payments	Subscription, credits, add-ons, invoices, payment methods	Customer understands entitlements and spending.
8	Community & Help	Premium community, events, support, settings and privacy	Customer receives ongoing support.

3A. Visual flowcharts and developer navigation framework

This section is the visual build map. Developers should implement the screens, records, status changes and permissions in the order shown. Each diagram is followed by a workflow matrix that can be converted directly into user stories, APIs, database states and QA test cases.

How to read the diagrams: teal = stakeholder action or main screen; navy/light blue = Think10 system process; amber = review or decision; red = exception, restriction or risk; green = successful result. Diamonds are decision points and arrows show the next system state.

Flow index

Flow	What the development team should understand
3A.1 Customer navigation framework	Shows the simple path from the customer home screen to AI advice, human advisors, bookings, action plans and payments.
3A.2 Onboarding and plan selection	Creates a useful business profile before asking the customer to choose a plan.
3A.3 Zyne-to-human advisory flow	Explains when Zyne resolves a question and when the system escalates the customer to a human advisor.
3A.4 Booking and service recovery	Defines the normal booking path and the controlled exception path for changes, no-shows, technical failures and disputes.

Development rule: every arrow must correspond to a valid status transition, permission check, backend event and testable next screen.

3A.1 Customer navigation framework

Shows the simple path from the customer home screen to AI advice, human advisors, bookings, action plans and payments.

3A.1 Customer navigation framework - developer workflow matrix

Use this matrix to build user stories, API events, database states, notifications and QA test cases for the flow shown on the previous page.

Step	Actor	Screen / trigger	User or admin action	Backend / status impact	Next destination
1	Customer	Sign in	Open the active business workspace.	Load plan, business context, alerts and next action.	Home
2	Customer	Home	Select Ask Zyne, My Business, Advisors, Bookings, Action Plans, Plan & Payments or Help.	Check permissions and entitlement.	Selected module
3	Customer	Module page	Complete the main task shown on the page.	Validate input and update linked records.	Success state / next action
4	System	Next-best-action engine	Recommend one relevant next step.	Use permitted context, open tasks and booking status.	Home/action notification

QA requirement: test the normal path, every decision branch, permission denial, notification, audit event and retry/error path shown in the diagram.

3A.2 Onboarding and plan selection

Creates a useful business profile before asking the customer to choose a plan.

3A.2 Onboarding and plan selection - developer workflow matrix

Use this matrix to build user stories, API events, database states, notifications and QA test cases for the flow shown on the previous page.

Step	Actor	Screen / trigger	User or admin action	Backend / status impact	Next destination
1	Customer	Registration	Create account, verify contact details and accept policies.	Create customer and default business record.	Guided onboarding
2	Customer	Business profile	Enter stage, sector, channels, goals and current challenges.	Save profile and calculate completeness.	Assessment
3	Customer	Business Health Assessment	Answer short diagnostic questions.	Calculate priority areas and recommended path.	Personalised results
4	Customer	Plan recommendation	Choose free, Zyne, Hybrid, Premium or Enterprise path.	Check eligibility and display clear entitlement comparison.	Checkout or dashboard
5	Payment/System	Checkout	Complete payment where required.	Activate subscription, credits and renewal schedule.	Personalised home

QA requirement: test the normal path, every decision branch, permission denial, notification, audit event and retry/error path shown in the diagram.

3A.3 Zyne-to-human advisory flow

Explains when Zyne resolves a question and when the system escalates the customer to a human advisor.

3A.3 Zyne-to-human advisory flow - developer workflow matrix

Use this matrix to build user stories, API events, database states, notifications and QA test cases for the flow shown on the previous page.

Step	Actor	Screen / trigger	User or admin action	Backend / status impact	Next destination
1	Customer	Ask Zyne	Submit a business question and optional files.	Create conversation and apply data permissions.	Processing state
2	Zyne	AI consultation	Use approved knowledge, current tools and customer context.	Return structured diagnosis, recommendations, risks and actions.	Answer screen
3	Customer/Sy stem	Resolution check	Confirm helpfulness or request deeper support.	Save feedback and determine escalation reason.	Action Plan or advisor matching
4	Customer	Advisor matching	Compare recommended advisors and choose a slot.	Validate entitlement/payment and availability.	Confirmed booking
5	Customer + Consultant	Consultation	Attend secure session.	Record attendance, consent and session output.	Report processing
6	Customer	Report / Action Plan	Review summary and accept tasks.	Create or update owners, deadlines and reminders.	Progress dashboard

QA requirement: test the normal path, every decision branch, permission denial, notification, audit event and retry/error path shown in the diagram.

3A.4 Booking and service recovery

Defines the normal booking path and the controlled exception path for changes, no-shows, technical failures and disputes.

Customer Booking, Reschedule and Service-Recovery Flow

3A.4 Booking and service recovery - developer workflow matrix

Use this matrix to build user stories, API events, database states, notifications and QA test cases for the flow shown on the previous page.

Step	Actor	Screen / trigger	User or admin action	Backend / status impact	Next destination
1	Customer	Advisor calendar	Select eligible slot.	Run real-time conflict and entitlement check.	Checkout/confirmation
2	System	Booking confirmation	Create booking, reminders and consent/preparation tasks.	Set status CONFIRMED.	Booking detail
3	Customer	Booking detail	Prepare, reschedule within policy or join call.	Version any change and notify consultant.	Updated booking/join room
4	System	Completion check	Determine successful, cancelled, no-show or technical failure.	Create service outcome record.	Report or recovery case
5	Support/Admin	Service recovery	Review evidence and policy.	Restore credit, refund, reschedule or escalate dispute.	Resolved case and notification

QA requirement: test the normal path, every decision branch, permission denial, notification, audit event and retry/error path shown in the diagram.

4. Home screen layout

Area	What the customer sees	Primary action
Welcome / business selector	Business name, stage and active plan.	Switch or edit business.
Ask Zyne box	Simple question field with suggested prompts.	Start conversation.
Next best action	One recommended action based on current context.	Complete task or book support.
Upcoming consultation	Advisor, topic, date/time, preparation status and join button.	Prepare / join / reschedule.
Action plan progress	Top three open actions and overdue items.	Mark progress or open plan.
Business health snapshot	Latest score and priority area.	View recommendations.
Credits and plan	Human credits, AI allowance status and renewal date.	Manage plan or buy add-on.
Alerts	Required consent, payment failure, report ready or advisor response.	Resolve alert.

5. Main customer journeys

Journey A - From new user to first recommendation

Step	User action	System response	Next screen / impact
------	-------------	-----------------	----------------------

Step	User action	System response	Next screen / impact
1	Create account and verify contact details.	Creates customer and default business profile.	Guided onboarding.
2	Answer a short business assessment.	Calculates initial profile and identifies priority needs.	Personalised home.
3	Ask Zyne a business question.	Uses customer context and returns structured guidance.	Zyne answer.
4	Save recommended actions.	Creates Action Plan tasks.	Action Plans.
5	Select paid plan or advisor where needed.	Checks entitlement, payment and availability.	Plan checkout or advisor booking.

Journey B - Booking and completing a human consultation

Step	User action	System response	Next screen / impact
1	Describe problem or select a Zyne escalation.	Creates consultation request and matching criteria.	Advisor recommendations.
2	Compare advisors and choose a time.	Validates credit/payment and reserves slot.	Booking confirmation.
3	Complete pre-call questions and share documents.	Builds advisor brief and permission links.	Preparation complete.
4	Join secure consultation.	Checks consent and starts session.	Call workspace.
5	Receive report and Action Plan.	Publishes advisor-approved result.	Report review.
6	Rate experience and track actions.	Updates quality data and customer plan.	Action Plans / follow-up.

6. Functional modules

6.1. Account creation and guided onboarding

Objective | MVP

Create an account with the minimum effort, then collect enough business context to personalise Zyne and advisor matching.

User-facing screens and controls

- Email/phone registration and verification.
- Choice: I have a business / I am planning a business.
- Short onboarding questions with progress indicator.
- Optional skip for non-critical questions.
- Consent and privacy choices.
- Plan recommendation shown only after useful initial value.

Backend data and processing

- Customer account, contact verification, consent records and marketing preferences.
- One or more business profiles linked to the account.

- Onboarding answers and source attribution.
- Abandonment stage and conversion events.

Business rules and validations

- Critical consent cannot be skipped.
- Customer can edit business information later.
- Sensitive fields are optional unless needed for a service.
- Do not force long forms before the customer can experience Zyne VA.

Notifications and system actions

- Verification code.
- Welcome message.
- Incomplete onboarding reminder where appropriate.

Permissions

- Customer accesses own account and businesses.
- Support can assist through audited support mode.
- Consultants cannot access onboarding data without an assigned booking and field permission.

Minimum acceptance criteria

- A new customer reaches the home dashboard in a few minutes.
- Progress saves automatically.
- Duplicate accounts are handled safely.

6.2. Home and next-best-action engine

Objective | MVP

Present the most relevant question, booking, task or business priority without overwhelming the customer.

User-facing screens and controls

- Ask Zyne input.
- One Next Best Action card.
- Upcoming booking.
- Open actions.
- Business health snapshot.
- Plan/credit summary.
- Notifications.

Backend data and processing

- Recommendation engine uses plan, business stage, recent conversations, overdue actions, bookings and alerts.
- Priority rules and explanation stored for each recommendation.
- Home-card interaction tracking.

Business rules and validations

- Only one primary recommendation at a time.
- Customer can dismiss or snooze non-critical suggestions.
- Paid upgrade prompts must be relevant and limited.
- Urgent service issues override commercial prompts.

Notifications and system actions

- Report ready.
- Action overdue.
- Booking reminder.
- Plan or payment issue.

Permissions

- Customer sees own recommendations.
- Admin can configure rules but cannot manually disguise advertisements as advice.

Minimum acceptance criteria

- Home remains useful for new, active and cancelled customers.
- Recommendation explains why it is shown.
- Dismissal preference is respected.

6.3. Ask Zyne - Virtual Assistant and Virtual Consultant**Objective | MVP**

Provide immediate, context-aware support while clearly distinguishing free platform help from paid business consulting.

User-facing screens and controls

- Conversation list and New Conversation.
- Clear VA or VC status label.
- Text input, file upload and suggested prompts.
- Answer sections: understanding, recommendation, assumptions, risks, next actions and sources where used.
- Save as report, create actions, book human advisor or ask follow-up.
- Usage/allowance indicator expressed simply.

Backend data and processing

- Conversation, message, model route, tools used, latency, cost, source references and safety flags.
- Customer/business context retrieved with permission.
- File processing status and extracted metadata.
- Resolution feedback and escalation reason.
- Memory items proposed, approved and retained.

Business rules and validations

- Zyne must not claim certainty when information is incomplete.
- Time-sensitive research should show sources/date where applicable.
- Regulated legal, tax, financial or investment advice is restricted or escalated.
- Customer can correct context and request deletion subject to policy.
- Fair-use or plan limits are explained before blocking an action.

Notifications and system actions

- Answer ready for long jobs.
- Usage threshold reached.
- Human escalation recommended.
- File processing failed.

Permissions

- Customer sees own conversations.
- Authorised AI operations staff see redacted or case-based data.
- Consultants receive only selected summaries attached to their bookings.

Minimum acceptance criteria

- Every answer can be rated helpful/not helpful.
- Failed model/tool calls provide recovery options.
- Created actions retain a link to the originating answer.

6.4. My Business profile and health assessment

Objective | MVP

Create a persistent business context so the customer does not repeat the same information in every conversation.

User-facing screens and controls

- Business overview, stage, industry, products/services, markets, channels, team, goals and challenges.
- Ten-dimension Business Health Assessment.
- Priority recommendations.
- Business goals and KPI tracking.
- Document library with sharing controls.
- Change history for important information.

Backend data and processing

- Structured business entity and assessment versions.
- Score calculation by dimension and total.
- Goal/KPI records with update frequency.
- Document metadata, permissions and retention.
- Source of each data item: customer, Zyne, advisor or admin.

Business rules and validations

- Scores must explain inputs and are advisory, not an official valuation.
- Customer approves major AI-inferred profile changes.
- Multiple businesses may be supported as a later entitlement.
- Deleting a document follows retention and active-booking rules.

Notifications and system actions

- Assessment due or refreshed.
- Goal check-in.
- Advisor requests approved document access.

Permissions

- Customer edits own business profile.
- Assigned consultants read only relevant permitted sections.
- Admin accesses according to support/compliance role.

Minimum acceptance criteria

- Assessment can be completed in stages.
- Score changes are versioned.
- Zyne and advisor briefs use the latest approved profile.

6.5. Advisor discovery, matching and comparison

Objective | MVP

Help the customer choose a suitable vetted advisor based on the problem, not on a confusing directory of profiles.

User-facing screens and controls

- Problem/category selection.
- Recommended advisors with match explanation.
- Filters: expertise, industry, language, availability, experience level and session type.
- Side-by-side comparison of up to three advisors.
- Profile with verified experience, topics, public rating and next availability.
- Book now or save advisor.

Backend data and processing

- Advisor search index and matching attributes.
- Ranking reason, quality eligibility, sponsored label and availability.
- Profile views, saves and conversion events.
- Search terms and no-result events.

Business rules and validations

- Only approved, available and quality-eligible advisors appear.
- Sponsored profiles are labelled and cannot bypass eligibility.
- Ranking balances relevance, quality, availability and customer preference.
- Personal contact information and external links are not displayed.

Notifications and system actions

- Saved advisor becomes available.
- Recommended advisor unavailable; alternatives offered.

Permissions

- Customer sees public advisor data.
- Admin manages search rules.
- Consultants cannot see who viewed them unless privacy-safe aggregate analytics are provided.

Minimum acceptance criteria

- No-result searches create an internal demand signal.
- Comparison uses the same fields for every advisor.
- Customer can understand why an advisor is recommended.

6.6. Booking, credits, preparation and rescheduling

Objective | MVP

Make booking simple while correctly handling plan credits, payments, timezones, consent and schedule changes.

User-facing screens and controls

- Choose session type and available time.
- Timezone confirmation.
- Credit or price summary before confirmation.
- Pre-call question form and document sharing.
- Upcoming/past booking list.
- Customer reschedule and cancellation controls with policy shown before confirmation.
- Add to calendar and reminders.

Backend data and processing

- Booking record, credit reservation, payment intent and expiry.
- Pre-call answers and shared-document permissions.
- Status and change history.
- Reminder schedule and delivery logs.
- Refund/credit restoration records.

Business rules and validations

- A slot is held only for a short configurable checkout period.
- Credits are reserved at confirmation and consumed according to completion/cancellation policy.
- Customer may reschedule within plan rules; consultant requests are presented for customer decision.
- No double booking.
- Advisor no-show restores the customer entitlement and triggers service recovery.

Notifications and system actions

- Confirmation.
- Reminder including one hour before.
- Reschedule request.
- Cancellation/credit result.
- Advisor change if required.

Permissions

- Customer manages own bookings.
- Advisor sees assigned booking.
- Operations can assist with documented reason.
- Finance handles refunds but does not alter schedule history.

Minimum acceptance criteria

- Customer always sees exact credit/payment impact before confirming.
- Timezone is visible on every booking screen.
- Duplicate payment or credit consumption is prevented.

6.7. Secure consultation experience

Objective | MVP

Allow the customer to join a voice/video session confidently, understand recording choices and receive help when technology fails.

User-facing screens and controls

- Join button and countdown.
- Device test.
- Clear recording/transcription consent.
- Video/voice controls, chat and file sharing where approved.
- Visible session time.
- Report safety/abuse button.
- Connection recovery guidance.

Backend data and processing

- Session token, consent, recording/transcript references, quality metrics and participant events.
- Safety/contact-sharing flags.
- Technical incident and support case link.

Business rules and validations

- No recording without consent.
- Personal contact exchange is prohibited and may be flagged.
- Customer can report a concern during or after the call.
- Session expiry and grace period are configurable.
- A serious safety issue can pause/end the call under approved rules.

Notifications and system actions

- Join reminder.
- Recording started notice.
- Connection issue.
- Call ended and report pending.

Permissions

- Booked participants join.
- QC access is case-based and audited.
- Other customers and consultants cannot enter using shared links.

Minimum acceptance criteria

- Reconnection preserves session state.
- Consent state is visible and logged.
- Technical failure offers reschedule/support rather than silent loss of credit.

6.8. Reports, recordings and action plans

Objective | MVP

Give the customer a useful outcome from every AI or human consultation and help track execution.

User-facing screens and controls

- Report library grouped by business and topic.
- Summary, recommendations, risks, actions, owners and deadlines.
- Recording/transcript access only where policy and consent allow.
- Clarification request.
- Create, edit and complete action items.
- Progress view: To Do, In Progress, Blocked, Done.
- Follow-up booking from an action or report.

Backend data and processing

- Versioned reports and source links.
- Action items linked to Zyne or human session.
- Status, owner, due date, evidence and completion note.
- Customer acknowledgement, rating and clarification thread.

Business rules and validations

- Delivered consultant reports cannot be silently overwritten.
- Customer may edit own action details but original recommendation remains visible.
- Recording access follows retention, consent and dispute-hold rules.
- Overdue reminders can be turned down except critical agreed follow-ups.

Notifications and system actions

- Report ready.
- Action due/overdue.
- Advisor clarification response.
- Follow-up recommended.

Permissions

- Customer accesses own content.
- Assigned consultant sees relevant report/action where relationship remains active.
- Admin access is purpose-limited.

Minimum acceptance criteria

- Every completed call has a visible outcome status.
- Actions can be created even if recording failed.
- Version history clearly identifies amendments.

6.9. Plan, credits, add-ons, billing and cancellations

Objective | MVP

Make costs and entitlements understandable to a non-technical customer and prevent unexpected charges.

User-facing screens and controls

- Current plan, renewal date and included features.
- Human consultation credit balance and expiry/rollover rules.
- AI usage shown in simple terms.

- Upgrade/downgrade, buy add-on and cancel controls.
- Payment methods, invoices, receipts, refunds and failed-payment resolution.
- Confirmation summary before every paid change.

Backend data and processing

- Subscription, entitlement, credit ledger, invoice, payment, refund and tax records.
- Plan version and grandfathered terms.
- Payment-provider references and reconciliation status.
- Cancellation reason and save-offer result.

Business rules and validations

- Credits use a ledger and cannot become negative.
- Plan changes clearly state effective date and financial impact.
- Cancellation does not remove historical reports immediately.
- Failed renewal follows grace-period and access rules.
- Refund decisions are traceable.

Notifications and system actions

- Renewal reminder where required.
- Payment success/failure.
- Credit low/expired.
- Plan changed/cancelled.
- Refund status.

Permissions

- Customer controls own payment methods and plan.
- Finance sees transactions and limited customer details.
- Support can create cases but not manually edit ledger totals.

Minimum acceptance criteria

- Customer can explain every balance from ledger entries.
- No duplicate charge on retry.
- Cancellation path is easy to find.

6.10. Premium community, events and networking

Objective | Phase 2 / Premium

Provide trusted networking without exposing members' phone numbers or forcing them into an external group.

User-facing screens and controls

- Topic-based community spaces.
- Member profile using controlled business information.
- Events, expert office hours and accountability circles.
- Request to connect through mutual consent.
- Report/block controls.
- Notification settings.

Backend data and processing

- Community membership entitlement.
- Posts, comments, events, connection requests, moderation and reports.
- No exposure of personal contact details by default.
- Community engagement analytics.

Business rules and validations

- Premium entitlement required.
- Phone/email/social links are blocked or moderated according to policy.
- Direct messaging may be enabled only after mutual acceptance.
- Community content follows moderation policy and is not treated as professional advice unless clearly identified.

Notifications and system actions

- Event reminder.
- Connection request.
- Moderation outcome.
- New response based on preference.

Permissions

- Members access entitled spaces.
- Moderators access reported content.
- Consultants participate only under clearly labelled roles.

Minimum acceptance criteria

- A member can participate without revealing a phone number.
- Block/report takes immediate effect for the reporter.
- Expired entitlement removes posting rights while preserving records.

6.11. Support, complaints, privacy and settings**Objective | MVP**

Give customers a safe route for technical help, service recovery, refunds, advisor complaints and personal-data requests.

User-facing screens and controls

- Help centre and guided issue categories.
- Ticket creation linked to booking/payment/report.
- Complaint and safety report.
- Refund/reschedule request.
- Privacy centre: consent, data download/deletion request and recording preferences.
- Security, notification, language and timezone settings.

Backend data and processing

- Ticket, complaint, dispute, privacy request, SLA and evidence records.
- Identity verification for sensitive requests.
- Security session/device logs.
- Customer communication history.

Business rules and validations

- Complaint submission does not automatically publish accusations.
- Serious safety cases are prioritised.
- Data-deletion requests respect legal/contractual retention.
- Critical transactional messages cannot be disabled.
- Support never asks for password or full payment credentials.

Notifications and system actions

- Ticket updates.
- Complaint acknowledgement and outcome.
- Security alert.
- Privacy request status.

Permissions

- Customer sees own cases.
- Specialised teams see only assigned categories.
- Consultant does not see confidential complaint content except through formal response process.

Minimum acceptance criteria

- Customer always sees ticket status and expected next step.
- Evidence is protected.
- Service recovery restores credits/refunds without altering original history.

7. Customer-facing KPI and progress measures

Measure	Customer meaning	System definition
Business Health Score	Where the business is strong or needs attention.	Versioned weighted score across Think10 dimensions.
Action completion	How much of the agreed plan is done.	Completed actions / active actions for selected period.
Advisor response quality	Whether consultations are useful.	Customer rating plus follow-up and resolution feedback.
Credit balance	How many included sessions remain.	Available ledger units after reservations and usage.
Goal progress	Movement toward customer-selected targets.	Latest KPI value compared with baseline and target.
Zyne resolution	Whether AI answered without escalation.	Customer-confirmed resolved conversations / eligible conversations.

8. Customer permission model

Function	Free	Zyne Paid	Hybrid	Premium	Cancelled
Limited Zyne VA	Yes	Yes	Yes	Yes	Limited
Zyne VC	No / trial	Yes	Yes	Enhanced	No after entitlement
Book human advisor	Pay per call	Pay per call	Included + add-on	Priority included + add-on	Pay after reactivation
Action plans	Basic	Yes	Yes	Enhanced	Read-only history

Function	Free	Zyne Paid	Hybrid	Premium	Cancelled
Premium community	No	No	Optional	Yes	No posting
Historical reports	Own free items	Yes	Yes	Yes	Read-only by policy

9. Error and service-recovery rules

Situation	Customer experience	Backend action
Payment succeeded but booking failed	Show payment received and support-safe message; do not ask customer to pay again.	Reconcile payment, retry booking or refund/credit automatically.
Advisor no-show	Immediate apology, credit restoration and fast rebooking options.	Create incident, exclude from customer loss, update advisor metric after review.
Call technology failure	Reconnect, switch to voice or reschedule without losing entitlement where justified.	Store diagnostics and create service case.
Zyne cannot answer	Explain limitation and offer better question, source research or human advisor.	Log unresolved intent and escalation.
Report delayed	Show expected status and support option.	Escalate consultant task and SLA.
Subscription payment failure	Grace period and clear update-payment path.	Retry schedule and entitlement state management.

10. MVP build priority

Priority	Build now	Build later
P0 - Required to launch	Account, business profile, Zyne, advisor discovery, booking/payment, call room, reports, action plans, plan/credits, support.	Community and advanced KPI integrations.
P1 - Stabilise	Better matching, health score, document permissions, service recovery, advanced notifications.	Multiple businesses and automation actions.
P2 - Growth	Premium community, events, goal dashboards, integrations with ecommerce/marketing platforms.	Advanced agentic execution with customer approval.

Shared platform assumptions

- **Responsive design:** All dashboards must work on desktop, tablet and mobile. High-complexity admin tables may use horizontal scrolling on smaller screens.
- **Role-based access:** Every page, button, record and export is controlled by user role and permission.
- **Single sign-on and security:** Email/phone verification, strong passwords, optional multi-factor authentication, session timeout and suspicious-login alerts.
- **Consent first:** Recording, transcription, AI analysis and document processing require visible consent and audit records.
- **One source of truth:** Customer, consultant, booking, payment, report and quality data must be stored as linked records rather than copied into disconnected tools.

- **Human review:** AI can flag and recommend, but high-impact decisions such as permanent suspension, payment withholding and dispute outcomes require authorised human approval.
- **Auditability:** Every important change records who changed it, what changed, when it changed and the previous value.
- **Simple experience:** Each dashboard should show only the actions relevant to that stakeholder. Advanced controls are hidden under More, Filters or Settings.

Non-functional requirements

Area	Requirement
Performance	Home page loads within 3 seconds under normal operating conditions; common actions provide visible feedback within 1 second.
Availability	Target 99.5% platform availability at launch, excluding planned maintenance.
Security	Encryption in transit and at rest; least-privilege access; secrets stored outside application code; periodic penetration testing.
Privacy	Configurable data-retention rules; controlled access to identity documents, bank details, recordings and transcripts.
Accessibility	Keyboard navigation, readable contrast, labelled form fields, screen-reader-friendly structure and captions/transcripts for recorded content.
Scalability	Services should support growth in users, calls, AI conversations and documents without redesigning the core data model.
Observability	Application logs, error logs, integration status, job queues, AI latency/cost, payment failures and call failures are monitored.
Backup and recovery	Automated backups, tested recovery procedures and defined recovery objectives.
Localization	Architecture should support English first and later Arabic and other languages, including right-to-left layout.
Customer trust	Every AI answer, charge, credit movement, report amendment and data-sharing event must be explainable to the customer.

Glossary for developers

Term	Meaning
Zyne VA	Free Virtual Assistant used for platform guidance, lead qualification and plan conversion.
Zyne VC	Paid Virtual Consultant used for business diagnosis, recommendations, reports and action plans.
Credit	A unit used to book a defined duration or type of human consultation.
Booking	A scheduled consultation between one customer and one consultant.
Consultation workspace	The secure screen containing the customer brief, call controls, notes, AI support and report tools.
Action Plan	A structured post-consultation record containing decisions, tasks, owners, deadlines and follow-up.
Quality flag	An AI or human-created alert for attendance, conduct, policy, advice quality or confidentiality concerns.
Advisor Quality Score	Combined score using ratings, attendance, complaints, repeat bookings, AI review and human QC.
Business Profile	The customer's structured business information, goals, stage, markets, channels and history.

Term	Meaning
Business Health Score	A diagnostic score across Think10 business dimensions.
RBAC	Role-based access control: permissions based on a person's assigned role.
Audit log	A permanent history of significant system actions and data changes.
